## MHD Reference Materials 2: List of Texts, Site Codes, and Collections

Matthew Looper

Department of Art and Art History, California State University Chico

Martha J. Macri

Professor Emerita, Department of Native American Studies  
Research Professor in Linguistics  
University of California, Davis

This report lists three tables useful when querying the Texts component of the Maya Hieroglyphic Database online ([mayadatabase.org](http://mayadatabase.org)). **Table 1** lists the 4890 texts currently included in the MHD, sorted by the three-digit site code which indicates where the text was found. These codes are expanded from the original listing by Ian Graham for the *Corpus of Maya Hieroglyphic Inscriptions* (Graham 1975), with revisions by Barbara Fash (2016). Unprovenienced texts are grouped under the site code 'COL'. In a few cases, for example *objabbr* = 'CRCHS', the site code is given as 'NAR' (Naranjo), which is where the majority of the stairway blocks were found, even though the original location of the stairway was Caracol. See the MHD for details regarding the provenience of the various components of similar texts which were moved about in antiquity, as well as other data for all texts. The first column in Table 1 corresponds to the *objabbr* field in the MHD. The second column is *objcodedest* field, and the third is *objname*.

**Table 2** lists all site codes that can be queried in the MHD, with their corresponding site names. The site

codes in column 1 can be queried in the field *objcodedest*, and most can be queried in *objcodeorig* (except 'COL'). The site names can be queried in field *obsitedest*.

**Table 3** lists all codes associated with museums/collections that appear in the MHD, with their corresponding names. The codes in column 1 can be queried in field *objlocabbr*. The museum/collection names can be queried in field *objloc*.
